Semi-synthetic and Natural Lipid Products

Generon now offers high quality lipids for research use such as signal transduction modulations, liposome and micelle studies. We offer phospholipids, phosphosphingolipids, cerebroside, phosphatidyl inositol bisphosphate etc. Our **Grade 1** classification implies that we have seen no impurities when at least 100 µg lipid has been run on a thin layer plate subsequently charred by a technique which reveals the presence of 1 µg lipid. **Grade 2** products are made either by simpler methods or are batches which just fail to pass our tests as Grade 1.

Lipids which are supplied in solution are dissolved in deoxygenated solvents and sealed under nitrogen in ampoules. All lipids need to be stored below -10°C.
